

Ardisia elliptica

shoebuttan ardisia

Appearance: Evergreen, glabrous shrub or small tree to 5 m (17 ft) tall, with smooth stems and new foliage often reddish.

Leaves: Alternate, to 20 cm (8 in) long, oblong to oval, fleshy, leathery, gland-dotted below, with margins entire.

Flowers: Axillary clusters, star shaped, 13 mm (0.5 in) wide, with mauve-colored petals.

Fruit: Rounded drupe, 6 mm (< 1 in) wide, red turning to black when ripe, with white juicy flesh.

Ecological threat:

Abundant in hammocks, old fields, disturbed wetlands, and tree islands in marshes, forming dense single-species stands in forest understories and crowding out native plants. Also invading cypress and mangrove areas along the New River in Broward County. FLEPPC Category I

Distribution: SW, SE

Field Notations

ARDIELLI/AREL4
