

Tradescantia spathacea oyster plant

Appearance: Perennial herb with short, stout stem nearly hidden by overlapping leaf bases. Forms clumps by offshoots from fleshy rootstock.

Leaves: Spreading-erect, closely overlapping in spiral pattern. Blades broadly linear, sharp-tipped, waxy, stiff, somewhat fleshy, 15-30 cm (6-12 in) long and 2.5-8 cm (1-3 in) wide; upper surfaces dark green or green with pale yellow stripes; lower surfaces usually purple.

Flowers: Small, white, clustered within a folded, boat-shaped bract (spathe) 3-4 cm long, short-stalked from leaf axils. Three petals, 6 stamens with hairy stalks.

Fruit: A 2-seeded capsule, in clusters within the bract.

Ecological threat:

Forms dense ground cover and clumps quickly. Has escaped into coastal tropical hammocks, where the dense cover prevents seedling growth of native canopy tree species. FLEPPC Category I

Distribution: SW, SE
