

Acacia auriculiformis

earleaf acacia

Acacia auriculiformis

earleaf acacia

Appearance: Evergreen, unarmed tree to 15 m (50 ft) tall, with compact spread, often multi-stemmed; young growth glaucous.

Leaves: Alternate, simple, reduced to flattened blade-like phyllodes slightly curved, 11-20 cm (5-8 in) long, with 3-7 main parallel veins and a marginal gland near the base; surfaces dark green.

Flowers: Loose, yellow-orange spikes at leaf axils or in clusters of spikes at stem tips; flowers mimosa-like, with numerous free stamens.

Fruit: Flat, oblong pod, twisted at maturity, splitting to reveal flat black seeds attached by orange, string-like arils.

Ecological threat:

Has invaded pinelands, scrub, and hammocks in south Florida, displaces native vegetation, and threatens to shade out rare plants. FLEPPC Category I

Distribution: SW, SE

Field Notations

ACACAURI/ACAU
