

Broussonetia papyrifera paper mulberry

Broussonetia papyrifera paper mulberry

Appearance: Small, thicket-forming shrub or small deciduous tree to about 15 m (45 ft) tall; sap milky; stems hairy; grows from stolons.

Leaves: Alternate, opposite, or whorled on the same plant; simple, hairy, 6–20 cm (2.5–8 in) long, 5–15 cm (1.5–6 in) wide; toothed and sometimes lobed margins; upper surfaces of mature blades rough to the touch; petioles 4–15 cm (1.5–6 in) long.

Flowers: Female flowers form in round, hanging clusters; male flowers appear in spring and form in drooping, elongated clusters.

Fruit: Orange to red; aggregated into globular clusters, diameter 2–3 cm (0.8–1 in).

Ecological threat:

FLEPPC Category II – Invasive exotics that have increased in abundance or frequency but have not yet altered Florida plant communities to the extent shown by Category I species.

Distribution: NW, NE, C, SW

Field Notations

BROUPAPY/BRPA4
