

Urena lobata

Caesar's weed

Urena lobata

Caesar's weed

Appearance: Herbaceous or shrubby perennial, 1–3 m (3.3–10 ft) tall; entire plant covered with star-shaped hairs.

Leaves: Alternate, petioles to 3 cm (1 in) long; blades broadly ovate to suborbicular-quadrate, to 10 cm (4 in) long; apex usually shallowly lobed or angled, margin toothed, densely stellate-hairy on the lower surface, less hairy on the upper surface.

Flowers: Solitary or in fascicles from axils; petals pink, to 1.5 cm (0.6 in) long.

Fruit: A 5-lobed capsule, 5–6 mm (0.2–0.25 in) long; stellate-hairy, covered with numerous, stiff barbed spines.

Ecological threat:

FLEPPC Category II – Invasive exotics that have increased in abundance or frequency but have not yet altered Florida plant communities to the extent shown by Category I species.

Distribution: NW, NE, C, SW, SE

Field Notations

URENLOBA/URLO
